Smart Cyber OT Security

Protect your data against next-gen threats

SCOTS "SMART CYBER OT SECURITY"

is a comprehensive threat detection solution for your manufacturing facilities. Cybersecurity threats silently intrude, develop, evolve and morph over time. These threats target the Industrial Control Systems (ICS) which is the core of the operational technology (OT) that consists of hardware & software components.

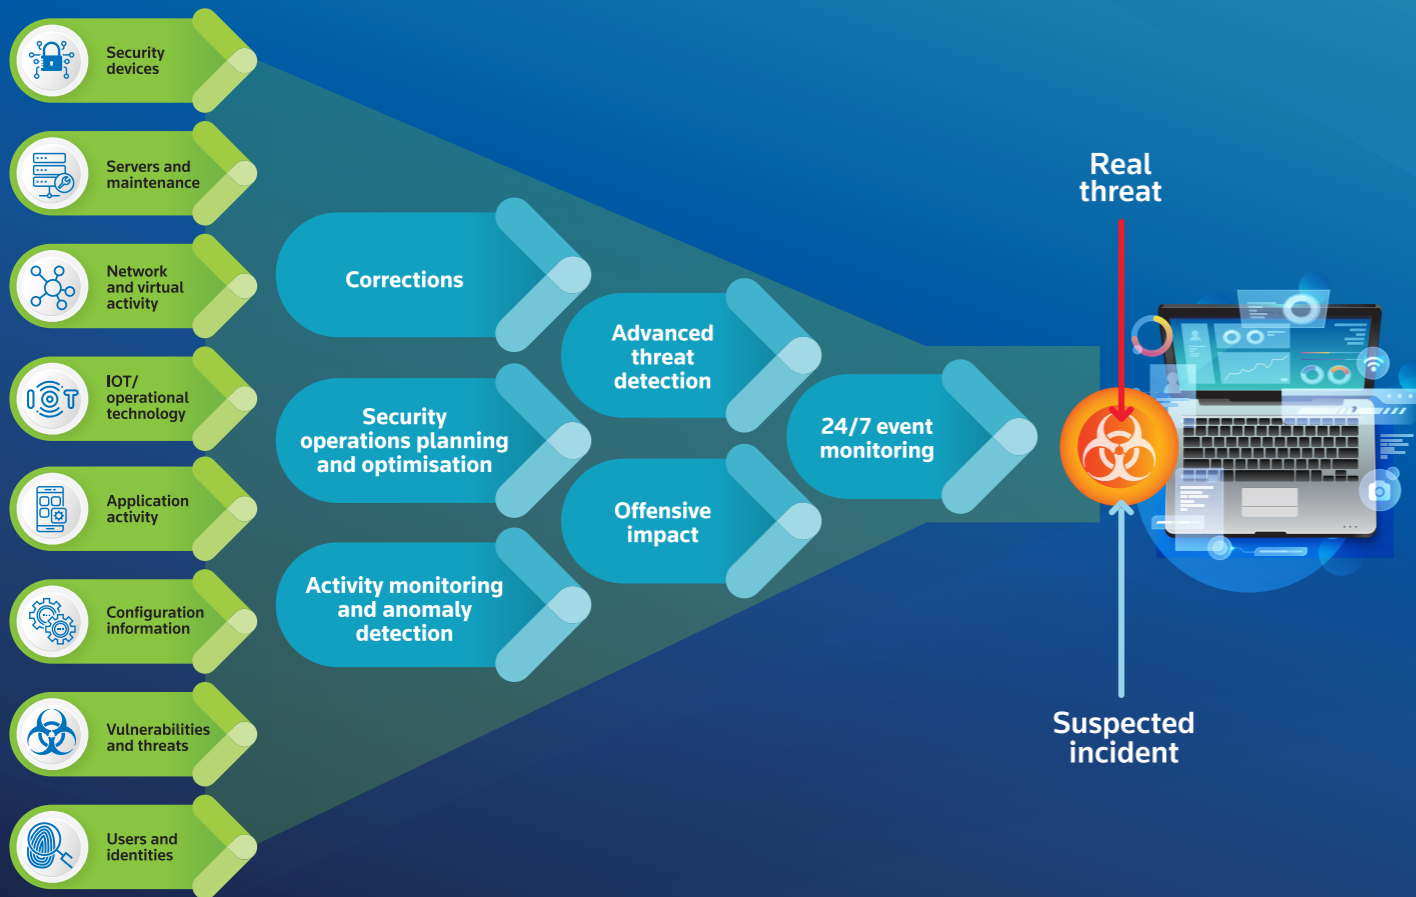

OT Cybersecurity is designed to

- 1 Secure production floor's critical assets against cyber risks**
- 2 Maintain uptime, quality & performance of manufacturing**
- 3 Protect safety of people, environment & machines against cyber risks**

Why SCOTS

SCOTS is an industrial Smart Cyber OT security solution that ensures traceability and management of risks against next-gen threats in a manufacturing environment continuously. It is designed to meet the changing security needs of OT environments in real time as cyber security threats constantly evolve.

Comprehensive Threat Detection

Smart Cyber OT Security

Key Features of SCOTS

SCOTS is designed to secure your OT network by tracking your digital asset map, including data, systems and applications, across the network. Tracking is enabled through continuous Vulnerability Management and controlled use of Administrative Privileges.

- 1 Mitigating Risk Exposure**
Administration, authority, authentication and access control management to minimize cyber risk exposure
- 2 Responding to Security Threats**
Intrusion detection, incident management and comprehensive risk reporting of the production floor
- 3 OT Cybersecurity Management**
Dynamic management of cybersecurity and reporting via the OT Risk Assessment Report on demand
- 4 Anomaly Detection Dashboard**
Managing and publishing vulnerabilities within the OT system and alerts against cyber risks or intrusion

Comprehensive Monitoring of Your Plant

24/7 CYBER DEFENSE

Clear and concise dashboard analytics that keep track of your ICS network

PROTECTING YOUR INVESTMENT

Securing your investment by reducing vulnerabilities to OT

REAL TIME ASSESSMENT

Live and continuous monitoring of your systems for intrusions or mismanagement

ACTIONABLE ANALYTICS

Diagnosis and arrest of threats while ensuring continuous workflow
